The Medicalization of Birth and Death Lauren K. Hall 2019-12-17 The Medicalization of Birth and Death is required reading for academics, patients, providers, policymakers, and anyone else interested in how policy shapes healthcare options and limits patients and providers during life's most profound moments. **Approaching Death** Committee on Care at the End of Life 1997-10-30 When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. Approaching Death reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. Approaching Death considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done." **Post-Acute and Long-Term Medicine** Pamela A. Fenstemacher 2015-12-12 This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of residents in post-acute and long-term care settings.

Hospice Palliative Home Care and Bereavement Support Lorraine Holtlander 2019-07-17 This book

provides a unique resource for registered nurses working in hospice palliative care at home and for the community, outside of acute care settings and also incorporates literature related to palliative care in acute health care settings, as part of the overall services and supports required. Very few resources exist which specifically address hospice palliative care in the home setting, despite the fact that most palliative care occurs outside acute care settings and is primarily supported by unpaid family caregivers. An overview of the concerns for individuals and families, as well as specific nursing interventions, from all ages would be an excellent support for nursing students and practicing registered nurses alike. The book structure begins with a description of the goals and objectives of hospice palliative care and the nursing role in providing excellent supportive care. Chapters include research findings and specifically research completed by the authors in the areas of pediatric palliative care, palliative care for those with dementia, and the needs of family caregivers in bereavement. Interventions developed by the editors are provided in this book, such as the "Finding Balance Intervention" for bereaved caregivers; the "Reclaiming Yourself" tool for bereaved spouses of partners with dementia; and The Keeping Hope Possible Toolkit for families of children with life threatening and life limiting illnesses. The development and application of these theory-based interventions are also highlighted. Videos and vignettes written by family caregivers about what was helpful for them, provide a patient-and family-centered approach./div The book will benefit nursing students, educators and practicing registered nurses by providing information, theory, and evidence from research.

Meeting the Needs of Older Adults with Serious Illness Amy S. Kelley 2014-09-01 Meeting the Needs of Older Adults with Serious Illness: Challenges and Opportunities in the Age of Health Care Reform provides an introduction to the principles of palliative care; describes current models of delivering palliative care across care settings, and examines opportunities in the setting of healthcare policy reform for palliative care to improve outcomes for patients, families and healthcare institutions. The United States is currently facing a crisis in health care marked by unsustainable spending and quality that is poor relative to international benchmarks. Yet this is also a critical time of opportunity. Because of its focus on quality of care, the Affordable Care Act is poised to expand access to palliative care services for the sickest, most vulnerable, and therefore most costly, 5% of patients- a small group who nonetheless drive about 50% of all healthcare spending. Palliative care is specialized medical care for people with serious illnesses. It focuses on providing patients with relief from the symptoms, pain, and stress of a serious illness—whatever the diagnosis or stage of illness. The goal is to improve quality of life for both the patient and the family. Research has demonstrated palliative care's positive impact on health care value. Patients (and family caregivers) receiving palliative care experience improved quality of life, better symptom management, lower rates of depression and anxiety, and improved survival. Because patient and family needs are met, crises are prevented, thereby directly reducing need for emergency department and hospital use and their associated costs. An epiphenomenon of better quality of care, the lower costs associated with palliative care have been observed in multiple studies. Meeting the Needs of Older Adults with Serious Illness: Challenges and Opportunities in the Age of Health Care Reform, a roadmap for effective policy and program design, brings together expert clinicians, researchers and policy leaders, who tackle key areas where real-world policy options to improve access to quality palliative care could have a substantial role in improving value.

Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal 2011-07-12 "In the preface to this impressive and well-produced book, the editors state that their aim is not to describe a new surgical specialty, since most surgeons will soon need to be "geriatric surgeons," but to assemble a comprehensive account that will allow "all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients." This is a useful book that deserves to do well. I hope that the editors and their publisher will have the stamina to make this the first of several editions, as it is clear that updated information about surgery in the elderly will be required to keep pace with this important field." Advance Care Planning Laura Charlotte Prater 2018 Advance Care Planning (ACP) refers to the communication of decisions regarding end-of-life treatment decisions prior to incapacitation. ACP has been associated with better health outcomes at the end of life such as less aggressive care prior to death, improved bereavement outcomes, earlier acceptance of a terminal condition and earlier acceptance of palliative care and hospice. The completion and documentation of ACP in the Electronic Health Record (EHR) is important so that end-of-life treatment decisions can be honored when patients are unable to speak for themselves. This process is multi-faceted and burdened with inconsistencies. Through three related studies, this dissertation used Donabedian's Structure, Process, and Outcome model as a framework for understanding the problem. Study one focused on the structural component of the EHR as it relates to the functionality and documentation of ACP. Results from a survey of over 400 end-of-life physicians indicated a mutual understanding of the importance of ACP documentation in the EHR coupled with critical challenges. Specific challenges included a lack of time and training. Having a consistent tab or area within the EHR was cited as a specific opportunity for facilitating the completion of ACP in the EHR. Study two analyzed the association between several process-related predictors and the completion of ACP documentation in the EHR. Findings indicated that older adults (over age 70) were less likely to have several process-related components of ACP and more likely to operationalized elements of ACP such as a verified Do Not Resuscitate (DNR) order. These findings indicate that there may be a gap in comprehensive communication with older adults, and they are more likely to have a DNR without documentation of a prior conversation or a scanned document in the medical record. Study three examined the association between outcomes and the documentation of ACP in the EHR. Findings indicate that having a DNR documented in the EHR and having an ACP note in the problem list are associated with reduced odds of an admission in the last 30 days of life. Having ACP documentation in the EHR was not associated with reduced charges at the end of life. The results of this dissertation may be used to strengthen the case that improvement in the documentation and

functionality of ACP in the EHR is required. There are several key practical considerations resulting from these studies that could be applied in the form of local quality improvement initiatives aimed at improving consistency in documentation. Other implications from these studies point toward continuing to support efforts to reimburse physicians for ACP conversations and improving standardized end-of-life communication training requirements for all clinicians.

Principles and Practice of Geriatric Psychiatry Marc E. Agronin 2006 Written by noted authorities in geriatric psychiatry, this volume is a clinically oriented guide to the diagnostic workup and treatment of

psychiatric and neuropsychiatric disorders in elderly patients. The book describes in detail the neurologic and neuropsychiatric patient assessment and the use of all treatment modalities, both psychotherapeutic and pharmacologic, in elderly patients. Chapters discuss the treatment of disorders in all clinical settings—inpatient, outpatient, emergency, primary care, assisted living, and long-term care. Algorithms for workup and treatment are included, as well as case studies and personal accounts by patients and care providers. Appendices provide drug information and additional resources.
