Humiliation, Degradation, Dehumanization Paulus Kaufmann 2010-10-07 Degradation, dehumanization, instrumentalization, humiliation, and nonrecognition – these concepts point to ways in which we understand human beings to be violated in their dignity. Violations of human dignity are brought about by concrete practices and conditions; some commonly acknowledged, such as torture and rape, and others more

contested, such as poverty and exclusion. This volume collates reflections on such concepts and a range of practices, deepening our understanding of human dignity and its violation, bringing to the surface interrelationships and commonalities, and pointing to the values that are thereby shown to be in danger. In presenting a streamlined discussion from a negative perspective, complemented by conclusions for a positive account of human dignity, the book is at once a contribution to the body of literature on what dignity is and how it should be protected as well as constituting an alternative, fresh and focused perspective relevant to this significant recurring debate. As the concept of human dignity itself crosses disciplinary boundaries, this is mirrored in the unique range of perspectives brought by the book's European and American contributors – in philosophy and ethics, law, human rights, literature, cultural studies and interdisciplinary research. This volume will be of interest to social and moral philosophers, legal and human rights theorists, practitioners and students.

Practical Ethics Peter Singer 2011-02-21 For thirty years, Peter Singer's Practical Ethics has been the classic introduction to applied ethics. For this third edition, the author has revised and updated all the chapters and added a new chapter addressing climate change, one of the most important ethical challenges of our generation. Some of the questions discussed in this book concern our daily lives. Is it ethical to buy luxuries when others do not have enough to eat? Should we buy meat from intensively reared animals? Am I doing something wrong if my carbon footprint is above the global average? Other questions confront us as concerned citizens: equality and discrimination on the grounds of race or sex; abortion, the use of embryos for research and euthanasia; political violence and terrorism; and the preservation of our planet's environment. This book's lucid style and provocative arguments make it an ideal text for university courses and for anyone willing to think about how she or he ought to live.

The Expanding Circle Peter Singer 2011-04-18 What is ethics? Where do moral standards come from? Are they based on emotions, reason, or some innate sense of right and wrong? For many scientists, the key lies entirely in biology--especially in Darwinian theories of evolution and self-preservation. But if evolution is a struggle for survival, why are we still capable of altruism? In his classic study *The Expanding Circle*, Peter Singer argues that altruism began as a genetically based drive to protect one's kin and community members but has developed into a consciously chosen ethic with an expanding circle of moral concern. Drawing on philosophy and evolutionary psychology, he demonstrates that human ethics cannot be explained by biology alone. Rather, it is our capacity for reasoning that makes moral progress possible. In a new afterword, Singer takes stock of his argument in light of recent research on the evolution of morality.

Everyday Discourses of Menstruation Victoria Louise Newton 2016-05-24 Menstruation is a topic which is both everyday and sensitive. From Leviticus to Pliny, to twentieth-century debates around 'menotoxin', to advertising and 'having the painters in', Victoria Newton's book offers a lively and innovative exploration of the social and cultural dimensions of menstruation. Through in-depth interviews with men and women, the book explores the many different ways in which this sensitive topic is spoken about in British culture. The Structure of Digital Computing Robert Grossman 2012 *The Structure of Digital Computing* takes a fifty year perspective on computing and discusses what is significant, what is novel, what endures, and why it is all so confusing. The book tries to balance two point of views: digital computing as viewed from a business perspective, where the focus is on marketing and selling, and digital computing from a research perspective, where the focus is on developing fundamentally new technology.

I Know Why the Caged Bird Sings Maya Angelou 2010-07-21 Here is a book as joyous and painful, as mysterious and memorable, as childhood itself. *I Know Why the Caged Bird Sings* captures the longing of lonely children, the brute insult of bigotry, and the wonder of words that can make the world right. Maya Angelou's debut memoir is a modern American classic beloved worldwide. Sent by their mother to live with their devout, self-sufficient grandmother in a small Southern town, Maya and her brother, Bailey, endure the ache of abandonment and the prejudice of the local "powhitetrash." At eight years old and back at her mother's side in St. Louis, Maya is attacked by a man many times her age—and has to live with the consequences for a lifetime. Years later, in San Francisco, Maya learns that love for herself, the kindness of others, her own strong spirit, and the ideas of great authors ("I met and fell in love with William Shakespeare") will allow her to be free instead of imprisoned. Poetic and powerful, *I Know Why the Caged Bird Sings* will touch hearts and change minds for as long as people read. "I Know Why the Caged Bird Sings liberates the reader into life simply because Maya Angelou confronts her own life with such a moving wonder, such a luminous dignity."—James Baldwin From the Paperback edition.

Moral Sentiments and Material Interests Professor Emeritus of Economics University of Massachusetts and Adjunct Professor Department of Politics Herbert Gintis 2005 *Moral Sentiments and Material Interests* presents an innovative synthesis of research in different disciplines to argue that cooperation stems not from

the stereotypical selfish agent acting out of disguised self-interest but from the presence of "strong reciprocators" in a social group. Presenting an overview of research in economics, anthropology, evolutionary and human biology, social psychology, and sociology, the book deals with both the theoretical foundations and the policy implications of this explanation for cooperation. Chapter authors in the remaining parts of the book discuss the behavioral ecology of cooperation in humans and nonhuman primates, modeling and testing strong reciprocity in economic scenarios, and reciprocity and social policy. The evidence for strong reciprocity in the book includes experiments using the famous Ultimatum Game (in which two players must agree on how to split a certain amount of money or they both get nothing.)

Fast Food Nation Eric Schlosser 2012 Explores the homogenization of American culture and the impact of the fast food industry on modern-day health, economy, politics, popular culture, entertainment, and food production.

Knowledge as Resistance Stevienna de Saille 2017-11-27 This book presents a historicised account of the Feminist International Network of Resistance to Reproductive and Genetic Engineering (FINRRAGE), a coordinated effort during the 1980s and 1990s by an international group of women to create and disseminate feminist knowledge about the then-new field of reproductive technologies. Bringing insights from science and technology studies together with social movements and feminist theory, it seeks to examine larger questions about knowledge and expertise in activist engagements with rapidly-developing technologies, as well as explore an important and neglected episode of feminist history. Its findings will be relevant to scholars in science studies, gender and women's studies and social movements, as well as to anyone with an interest in reproductive technologies and the history of feminist activism.

Reconceiving Reproductive Health: Theological and Christian Ethical Reflections Manitza Kotzé 2019-12-12 While reproduction is fairly often touched upon in theological and Christian ethical discussions, reproductive health is not. However, reproductive health is a matter of theological and ethical concern. Discussion pertaining to reproductive health includes a number of debates about, for instance, abortion and the termination of pregnancy, reproductive loss, childlessness, infertility, stillbirth, miscarriage and adoption. Additionally, new reproductive possibilities made available by the development of reproductive technology have necessitated theological and ethical reflection on, for example, surrogacy, post-menopausal pregnancies, litter births, single mothers or fathers by choice, in vitro fertilisation and the so-called saviour siblings. These new developments compel us to reconceive our notions of what reproductive health is or

should be. Many of these topics are receiving increasing attention in a variety of theological publications. The focus of this volume is unique, however, and to the best of our knowledge, this is the first volume dealing not only with reproductive issues, but also reflecting theologically and ethically on reproductive health. It makes a contribution by providing a variety of perspectives from different theological fields on this theme, and in many chapters, focussing especially on the South African context. These discussions are also part of urgent debates within churches, which require developing life-giving theological language and imaginative theological alternatives that may speak to experiences of matters relating to reproductive health. The popular books, TV series and films that touch upon these discussions - including *The Handmaid's Tale* and *Mother!* - strengthen the perception that a more in-depth theological and ethical discussion on the theme may be necessary, particularly towards exploring stories and confessions from our faith tradition that may provide us with a timely opportunity to do the important work of theological 'reconceiving'.

World Development Report 2006 World Bank 2005-09-28 This year's 'World Development Report', the twenty-eighth, looks at the role of equity in the development process. It defines equity in terms of two basic principles. The first is equal opportunities: that a person's chances in life should be determined by his or her talents and efforts, rather than by pre-determined circumstances such as race, gender, social or family background. The second principle is the avoidance of extreme deprivation in outcomes, particularly in health, education and consumption levels. This principle thus includes the objective of poverty reduction. The report's main message is that, in the long run, the pursuit of equity and the pursuit of economic prosperity are complementary. In addition to detailed chapters exploring these and related issues, the Report contains selected data from the 'World Development Indicators 2005'--an appendix of economic and social data for over 200 countries. This Report offers practical insights for policymakers, executives, scholars, and all those with an interest in economic development.

Legalising Mitochondrial Donation Rebecca Dimond 2018-03-21 In 2015 the UK became the first country in the world to legalise mitochondrial donation, a controversial germ line reproductive technology to prevent the transmission of mitochondrial disease. Dimond and Stephens track the intense period of scientific and ethical review, public consultation and parliamentary debates preceeding the decision. They draw on

stakeholder accounts and public documents to explore how patients, professionals, institutions and publics mobilised within 'for' and 'against' clusters, engaging in extensive promissory, emotional, bureaucratic, ethical, embodied and clinical labour to justify competing visions of an ethical future. They describe how this decision is the latest iteration of a UK sociotechnical imaginary in which the further liberalization of human embryo research and use is rendered legitimate and ethical through modes of consultation and permissive but strictly regulated licensing. Overall, this book presents a timely, multi-dimensional, and sociological account of a globally significant landmark in the history of human genetics, and will be relevant to those with an interest in genetics, Science, Technology and Society, the sociology of medicine, reproductive technology, and public policy debate.

We Are Family Susan Golombok 2020-07-02 Our understanding of what makes a family has undergone a revolution in the last few decades, from same-sex parenthood to surrogacy, donor conception, and IVF. But what has the impact been on children? In *We Are Family*, Professor Susan Golombok visits lesbian mothers, gay fathers, single parents, donor conception parents, co-parents, trans parents, surrogates, and donors, and, more importantly, their children, to find out if they are as well-adjusted, happy, and emotionally stable as children from traditional nuclear families. And she discovers that the answer is yes — and sometimes even more so. Susan's work at the Centre for Family Research at Cambridge proves that any family set-up can provide a loving, secure home for a child — although, the children from these families will often face prejudiced attitudes from others. Since the 1970s, when she was first drawn to this area of research after reading about lesbian mothers whose children were being removed from their care, Susan has worked tirelessly to challenge outdated attitudes and prevent families being split up for no good reason. This book tells the stories of those families — their struggles and their triumphs — while celebrating love and family in all its wonderful variations.
